

The Grease Gator System: The Aqueous Cleaning Solution + The Purifier

Working together to provide a technologically advanced Parts Washer System

The Grease Gator cleans 57% faster than mineral spirits and this power is constant day in, day out. No degradation of cleaning power is experienced because the the low emulsifying cleaning solution working with the Grease Gator Purifier immediately separates the contaminant out of the cleaning solution.

We welcome you to test the Grease Gator with your most difficult to clean parts. We are confident that you will be impressed with its power and will want it to be your parts washer.

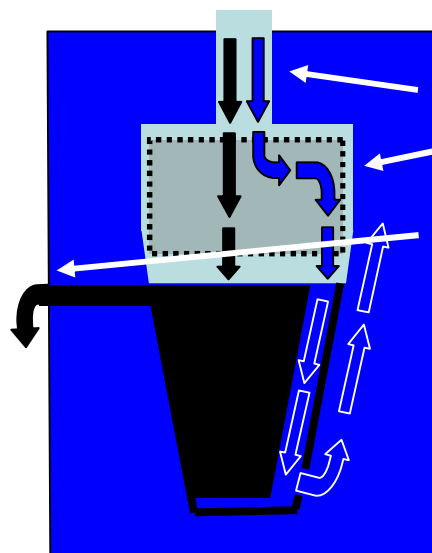

Used oil is purged from the Grease Gator with a simple turn of a valve.

Cross-section of Drum

Innovative Purifier System

- Oil & water never mix.
- Purifier splits oil to collection reservoir and re-circulates purified cleaning solution for constantly powerful cleaning.
- Oil is ejected from system from collection reservoir (see inset picture below).

Award-Winning Design

- ☆ Developed by pollution control engineers at the University of Illinois.
- ☆ Winner of the 2005 Chicago Innovation Award.
- ☆ Winner of the 2005 Illinois Governor's Award for Pollution Prevention.

High Quality Engineering and Construction

1500 Watt immersion heater with digital temperature sensor to maintain optimum cleaning temperature.

Magnetic induction 300 GPH pump delivers strong pressure for cleaning and keeps cleaning solution circulating for even heating and purification.

One-hand controlled stainless steel lid and stainless steel sink (32" L X 20" W X 7.5" D) provides years of service keeping "like new" appearance.

Overall quality of appearance is a welcome addition to facilities who put an emphasis on providing a state-of-the-art work environment.
